Yoga Mat	38,717.61	283	3.74
Dumbbells	39,047.34	277	3.70
Football	37,833.16	275	3.78
Jeans	26,910.80	238	3.78
Skincare Kit	16,275.77	193	3.88
Total	1,425,452.61	5000	3.78

Key Insights

- Electronics brings in nearly two-thirds of total revenue, far ahead of every other category. Revenue across age groups stays fairly even, with 41-50 only slightly ahead.
- Purchase history looks similar across all age groups. Men generate about 80% of revenue, mainly because only men buy Electronics in this data.
- Discounts sit fairly evenly across categories, around 14-15%. Ratings follow the same pattern, staying consistent no matter what's purchased.
- Sales stay steady through the year, with Spring slightly ahead. Card is the clear preferred payment method, used in about 4 out of 5 transactions.
- Laptops, phones, headphones, and smart watches are the top-selling products (all from Electronics) reinforcing how central that category is to overall performance.

Recommendations

- Electronics drives most of the revenue, so keep it well stocked and visible. At the same time, build a second strong category to reduce dependence on just one.
- All age groups perform similarly, so spread marketing evenly. Adjust the message by age (trend focused for younger customers, convenience focused for older ones).
- Electronics purchases currently come only from men, which explains the revenue gap. Making this category more appealing to women could unlock real growth.
- Discounts don't seem to affect satisfaction much, so try deeper discounts on slower categories like Groceries to boost their sales.
- Every category is rated consistently well, so highlight this in marketing to reassure new customers.
- Sales stay steady all year with only a small lift in Spring, so a light seasonal push is enough.
- Card is already preferred, so keep that experience smooth, while still paying attention to customers who choose Cash on Delivery.
- Laptops, phones, and headphones sell the most, so offer add-ons like cases or warranties at checkout to boost order value.
