

Retail Store Sales Performance Report

Developed By: Muhammad Taha Imran

Project Background:

- I have to analyze sales performance for a multi category retail store looking to better understand its customers and revenue drivers.
- The goal was to turn raw transaction data into clear insights that support smarter business decisions around marketing, discounts, and customer engagement.
- The analysis covers the full process from cleaning the data, to building an interactive dashboard, to summarizing key findings and recommendations.

	A	B	C	D	E	F	G	H	I	J	K
1	CustomerID	Age	Gender	Category	ItemPurchased	Amount	Season	PaymentMethod	ItemRating	DiscountApplied(%)	PreviousPurchases
2	C-5001	58	Female	Accessories	Handbag	115.5	Autumn	Card	3.5	18	4
3	C-5002	40	Male	Mens Clothing	Shirt	103.43	Spring	Card	4.1	13	4

Data Overview:

- The dataset includes 5k customer transactions, each representing a single purchase.
- It covers 9 product categories, including Electronics, Footwear, Groceries, Home, Beauty, Sports, and both Men's and Women's Clothing.
- Each transaction includes details such as customer age, gender, purchase amount, season, payment method, item rating, discount applied, and number of previous purchases.
- Customer purchase history was used to group customers into three loyalty tiers (New, Regular, and Loyal) to better understand buying behavior.

Key Metrics Overview:

- The store generated a total revenue of \$1.43 million across all sales
- A total of 5,000 transactions were completed during this period.
- On average, each customer spent about \$285.09 per purchase.
- Customers rated their purchases 3.78 out of 5 on average, reflecting strong overall satisfaction.

Revenue vs. Discount by Category :

- Electronics brings in far more revenue than any other category, \$895.40K. Footwear and Sports follow, while Groceries and Home contribute the least.
- Discounts stay close across all categories, roughly between 14.5% and 15.4% (no category is discounted noticeably more than another).
- Electronics leads in revenue without needing heavier discounts, its strength comes from what it sells, not price cuts.

Ratings and Loyalty by Category :

- Ratings stay close across all categories, generally between 3.74 and 3.82 (satisfaction is consistent no matter what's purchased).
- Home and Womens Clothing attract slightly more repeat buyers, while Mens Clothing and Beauty show the lowest, but differences are small overall.
- Category has little effect on customer satisfaction or loyalty, both stay fairly steady across the board.

Category and Item Performance :

Category Performance Overview

Category	Total Revenue	Total Transactions	Avg Rating
Accessories	47,633.83	470	3.78
Beauty	43,887.06	529	3.82
Electronics	895,402.35	507	3.79
Footwear	141,142.24	983	3.79
Groceries	14,015.96	332	3.81
Home	46,374.22	286	3.82
Mens Clothing	59,680.43	511	3.80
Sports	115,598.11	835	3.74
Womens Clothing	61,718.41	547	3.75
Total	1,425,452.61	5000	3.78

Item Performance Overview

Item Purchased	Total Revenue	Total Transactions	Avg Rating
Sandals	46,042.49	339	3.83
Formal Shoes	47,301.48	324	3.76
Sneakers	47,798.27	320	3.78
Yoga Mat	38,717.61	283	3.74
Dumbbells	39,047.34	277	3.70
Football	37,833.16	275	3.78
Jeans	26,910.80	238	3.78
Skincare Kit	16,275.77	193	3.88
Total	1,425,452.61	5000	3.78

- Electronics leads in revenue despite fewer transactions, while Footwear and Sports drive the most volume, and Groceries lags behind overall. Among individual items, Sandals, Formal Shoes, and Sneakers sell the most, while Skincare Kit has the fewest sales but the highest rating.

Revenue by Age Group and Gender :

- Customers aged 41-50 generate the most revenue, though all age groups perform fairly similarly overall. Male customers account for 80.66% of total revenue compared to 19.34% from female customers, a gap mainly driven by Electronics purchases coming only from men.

Revenue by Season, Payment Method, and Top Items :

- Revenue stays fairly steady through the year, with Spring performing the best and Autumn the lowest. Card is the clear preferred payment method, used in about 80% of transactions, and the top revenue-generating items (Laptop, Mobile Phone, Headphones, and Smart Watch) are all Electronics products.

Customer Loyalty and Spending Patterns :

- Regular customers make up the majority of the customer base at 64.62%, followed by Loyal at 23.36% and New at just 12.02%. Interestingly, New customers actually spend slightly more per order on average than Regular or Loyal customers, and purchase history stays fairly similar across all age groups, with only a small edge for customers aged 61-70.

Key Insights :

- Electronics is the biggest revenue driver, generating \$895,402 (almost two-thirds of total revenue) despite having fewer transactions than categories like Footwear or Sports, showing it's a high value rather than high volume category.
- Beyond Electronics, items like Sandals, Formal Shoes, and Sneakers perform reliably well, showing solid transaction volume and consistent customer ratings.
- Male customers account for about 80% of total revenue, while female customers make up the remaining 20%, a gap driven almost entirely by Electronics purchases coming only from men in this data.
- Revenue stays fairly even across all age groups, with customers aged 41-50 performing only slightly better than the rest.
- Most customers fall into the "Regular" loyalty tier at nearly 65%, followed by "Loyal" customers at about 23%, while only 12% are new to the store.
- New customers actually spend slightly more per order on average than Regular or Loyal customers, showing that loyalty tier doesn't necessarily lead to bigger purchases.

Key Insights :

- Purchase history remains fairly consistent across age groups, with customers aged 61-70 showing marginally more repeat purchases than younger groups.
- Discounts are applied fairly evenly across all product categories, generally staying between 14.5% and 15.4%, meaning no single category is being pushed harder through pricing.
- Customer ratings stay consistently strong across every category, generally falling between 3.74 and 3.82 out of 5, showing that satisfaction doesn't change much based on what customers buy.
- Sales remain fairly steady throughout the year, with Spring performing the best and Autumn the weakest, though the difference between seasons is modest.
- Card is the clearly preferred payment method, used in about 80% of all transactions, while Cash on Delivery accounts for the remaining 20%.
- The top selling individual products (Laptop, Mobile Phone, Headphones, and Smart Watch) all belong to the Electronics category, reinforcing its central role in the store's overall performance.

Recommendations :

- Continue investing in Electronics since it drives most of the revenue, but work on growing a second strong category so the business isn't overly dependent on just one product line.
- Explore ways to make Electronics more appealing to female customers, since this category currently attracts only male buyers and represents a clear opportunity to grow revenue from an underserved segment.
- Keep marketing efforts spread evenly across age groups, since performance is fairly consistent across all brackets, but consider tailoring messaging by life stage, trend-focused campaigns for younger customers and convenience-focused offers for older ones.
- Reconsider how discounts are used, since applying them evenly across all categories isn't clearly driving stronger performance; testing deeper discounts on slower categories like Groceries could help boost their sales specifically.

Recommendations :

- Use the store's consistently strong ratings as a trust signal in marketing, since customer satisfaction remains solid across every category, which can help build confidence with new or hesitant buyers.
- Introduce small, targeted seasonal promotions, particularly around Spring when sales are already strongest, to further boost revenue during peak periods without overspending on off-peak seasons.
- Continue optimizing the card payment experience since it's clearly the customer's preferred method, while also paying attention to the smaller group still using Cash on Delivery to understand their needs.
- Use top-selling Electronics items like laptops and phones as anchor products for cross-selling accessories, cases, or extended warranties, helping increase order value without needing to acquire new customers.
- Since new customers already spend slightly more per order than loyal ones, consider building a stronger loyalty or repeat-purchase incentive program to encourage existing customers to spend more over time.
